

The Top Rated Tinting and Opaquing System for the Past 20 Years!

# Renamel® Creative Color™

Creative Color Tints and Opaques are key ingredients to creating totally invisible restorations. This is the stage where your creativity as a dentist really gets to shine through... so have fun!

*"Cosmedent is the acknowledged leader when it comes to a comprehensive approach to color modification... it is hard to beat Creative Color!"*

– Product evaluation, 2009

## Creative Color Opaques

This one-of-a-kind opaquing system helps you block light and blend color at the same time. Creative Color Opaques

come in 13 shades that cover the entire VITA® shade range. They are also perfectly color matched to all Renamel composites, giving you the flexibility to opaque all VITA colors with complete predictability.

- Block light transmission by producing opacity
- Increase value of your final restoration
- Mask out unsightly metals and dark stains — so you can achieve natural, not overly opaque results
- Create hypoplasia
- 13 shades cover the entire VITA® shade range
- Paints on easily

Application of Opacifier

## Creative Color Tints

Creative Color Tints are used to impart character, and to help make your restorations look more natural. Unlike opaques, tints decrease value and are great for adding translucency back into your restoration.

- Impart incisal translucency and cervical darkening
- Produce craze lines, check lines and maverick colors
- Mimic surface artifacts such as pit and fissure staining

*Renamel gives you more restorative options than any other system!*

*"Great colors, especially honey-yellow!"*

## Renamel® Pink Opaque™

This 'Must Have' product helps you cover up dark stains for good!

- Neutralize unsightly dentition and dark stains completely
- Blocks out tetracycline stains and metal
- Solves the problem of non-vital teeth
